

INTERNSHIP REPORT PRESENTATION

ShopSphere

Development of a Frontend-Based E-Commerce Shopping Website
for INFUST PVT LTD

Luv Singh Chauhan

Roll No. 25SCS1003002552

Web Developer Intern

INFUST PVT LTD, Mumbai

IILM University

School of CSE · B.Tech CSE, 2026-27

Internship Duration: 10 July 2026 – 14 August 2026

OVERVIEW

Candidate & Internship Snapshot

A quick summary of the student and the internship engagement covered in this report.

NAME

Luv Singh Chauhan

ROLL NUMBER

25SCS1003002552

PROGRAMME

B.Tech, Computer Science & Engineering

UNIVERSITY

IILM University, Greater Noida, U.P.

Internship Details

ORGANIZATION

INFUST PVT LTD, Mumbai

ROLE

Web Developer Intern

DURATION

10 July 2026 – 14 August 2026

SUPERVISOR

Er. Rakesh Kumar, Managing Director

About the Organization

INFUST PVT LTD is a Mumbai-based technology company that undertakes web and software development projects and provides internship training to students in real-world project environments.

The organization focuses on practical, project-based learning, pairing interns with a live deliverable rather than purely theoretical assignments. The internship was supervised by Er. Rakesh Kumar, Managing Director, who guided requirements, reviewed progress, and provided feedback throughout the internship.

Problem Statement

Students often learn HTML, CSS, and JavaScript in isolation — without assembling them into a complete, functioning application. Small businesses, in turn, often need a working demonstration of an online storefront before committing to the cost of a full backend, database, and payment gateway.

The core question this project answers:

How can a complete, realistic online shopping experience — covering browsing, searching, cart management, checkout, and order tracking — be built using only frontend technologies, while still persisting user data reliably across browser sessions and behaving exactly as a backend-connected application would?

Project Objectives

Six goals guided the design and development of the ShopSphere storefront.

Frontend-Only Build

A fully functional e-commerce site with no backend server, database, or real payment gateway.

Persistent Cart & Wishlist

User selections retained even after refreshing or closing the browser.

Profile, Orders & Admin

Order-tracking view and an admin panel to add, edit, or remove products live.

Core Shopping Features

Product listing, search, category/price filtering, sorting, and detailed product views.

Multi-Step Checkout

Address entry, delivery selection, simulated payment, review, and confirmation.

Fully Responsive UI

A consistent, accessible interface across desktop, tablet, and mobile screens.

Scope of the Project

The project was scoped strictly to the frontend layer, using localStorage to simulate persistence.

In Scope

- ✓ Home, Shop/listing, and Product Detail pages
- ✓ Filtering, sorting, cart, and wishlist
- ✓ Multi-step checkout flow
- ✓ Profile dashboard and order tracking
- ✓ Admin panel for catalogue management
- ✓ Data persistence via browser localStorage

Out of Scope

- ✗ Real payment processing
- ✗ Server-side user authentication
- ✗ Persistent multi-device data sync
- ✗ Backend infrastructure and databases

Technologies & Tools Used

A frontend-only stack chosen for reliability, speed, and clean visual presentation.

HTML5

Semantic structure of the single-page application

CSS3 / Tailwind CSS

Modern, responsive, utility-first visual design

JavaScript (ES6+)

Client-side router, state management, rendering

localStorage API

Persists catalogue, cart, orders & profile data

Google Fonts

Consistent, brand-appropriate typography

VS Code & DevTools

Development, debugging & responsive testing

System Architecture

ShopSphere is a single-page application (SPA) that runs entirely in the browser.

The Storefront reads from the same shared state, so admin edits appear immediately on the shop and product pages.

Methodology

The project was developed iteratively across five phases during the internship.

Expected Outcomes

What the internship set out to deliver, and the skills it was designed to build.

Working Prototype

A fully working shopping website prototype demonstrating a complete customer journey with no backend dependency.

Reusable Codebase

A frontend codebase that can later connect to a real backend, database, and payment gateway with minimal restructuring.

Portfolio-Ready Experience

Practical, portfolio-ready experience building a production-style, state-driven web application.

Strengthened Fundamentals

Deeper understanding of client-side routing, component-style UI rendering, and real-world project organization.

Internship Completion Certificate

Certificate issued by INFUST PVT LTD, Mumbai, in recognition of successful completion of the internship.

Thank You
